Artificial gene sequence (M2 RNA) corresponding to G131-C143 of p25p1 RNA, stem loop and autocleavage sites.
                                                                                                                                                                                                                                                                                                                                                                                                                  Original source text: Artificial gene RNA.
Synthetic derivatives of the 13 nucleotides from position G131-C143 of precursor number 2 species 1 (p2Sp1) RNA from T4-infected B. coli cells are found in accession numbers 132900-132916. These synthetic sequences were made for the study of the autocleavage within this region of the p2Sp1 RNA. The naturally occurring 13 nucleotide sequence of p2Sp1 RNA is found in accession number
